

Fifth Grade FOSS Pacing Guide 2017-2018

Quarter 1	Quarter 2	Quarter 3	Quarter 4
<p style="text-align: center;">Unit 1: Mixtures and Solutions</p> <p style="text-align: center;">Aug. 21 - Nov. 9 (approx. 47 days)</p> <p>Investigation 1 - Separating Mixtures (approx. 10 days) Investigation 2 - Developing Models (approx. 10 days) Investigation 3 - Concentration (approx. 10 days) Investigation 4 - Reaching Saturation (approx. 12 days) Investigation 5 - Fizz Quiz (approx. 8 days)</p>			
	<p style="text-align: center;">Unit 2: Living Systems</p> <p style="text-align: center;">Nov. 13 - Feb. 16 (approx. 50 days)</p> <p>Investigation 1 - Systems (approx. 11 days) Investigation 2 - Nutrient Systems (approx. 14 days) Investigation 3 - Transport Systems (approx. 13 days) Investigation 4 - Sensory Systems (approx. 9 days)</p>		
 <p>The diagram illustrates the FOSS framework. It features a central white triangle with three colored segments: a blue segment at the top left labeled 'Practices', an orange segment at the top right labeled 'Core Ideas', and a green segment at the bottom labeled 'Crosscutting Concepts'.</p>		<p style="text-align: center;">Unit 3: Earth & Sun</p> <p style="text-align: center;">Feb. 20 - May 25 (approx. 55 days)</p> <p>Investigation 1: The Sun (approx. 10 days) Investigation 2: Planetary Systems (approx. 15 days) Investigation 3: Earth's Atmosphere (approx. 7 days) Investigation 4: Heating Earth (approx. 13 days) Investigation 5: Water Planet (approx. 10 days)</p>	

Unit Title: Mixtures and Solutions

Quarter 1/2

Approximate Teaching Dates	Aug. 21 - Nov. 9 (approx. 47 days)
Domain(s)	Physical Science (PS), Engineering, Technology, and Applications of Science (ETS)
Performance Expectations	<p>5-PS1-1 (Investigation 1, 2, 3, 4, 5) Develop a model to describe that matter is made of particles too small to be seen. <i>[Clarification Statement: Examples of evidence could include adding air to expand a basketball, compressing air in a syringe, dissolving sugar in water, and evaporating salt water.] [Assessment Boundary: Assessment does not include the atomic-scale mechanism of evaporation and condensation or defining the unseen particles.]</i></p> <p>5-PS1-2 (Investigation 1, 2, 3, 5) Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved. <i>[Clarification Statement: Examples of reactions or changes could include phase changes, dissolving, and mixing that form new substances.] [Assessment Boundary: Assessment does not include distinguishing mass and weight.]</i></p> <p>5-PS1-3 (Investigation 4, 5) Make observations and measurements to identify materials based on their properties. <i>[Clarification Statement: Examples of materials to be identified could include baking soda and other powders, metals, minerals, and liquids. Examples of properties could include color, hardness, reflectivity, electrical conductivity, thermal conductivity, response to magnetic forces, and solubility; density is not intended as an identifiable property.] [Assessment Boundary: Assessment does not include density or distinguishing mass and weight.]</i></p> <p>5-PS1-4 (Investigation 5) Conduct an investigation to determine whether the mixing of two or more substances results in new substances.</p> <p>3-5-ETS1-1 (Investigation 1, 4) Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.</p> <p>3-5-ETS1-2 (Investigation 1, 4) Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.</p> <p>3-5-ETS1-3 (Investigation 1) Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.</p>
Science and Engineering Practices	<p>Asking questions and defining problems (Investigation 4)</p> <ul style="list-style-type: none"> Define a simple design problem that can be solved through the development of an object, tool, process, or system and includes several criteria for success and constraints on materials, time, or cost. (3-5-ETS1-1) <p>Developing and using models (Investigation 1, 2, 3, 4, 5)</p> <ul style="list-style-type: none"> Develop a model to describe phenomena. (5-PS1-1) <p>Planning and carrying out investigations (Investigation 1, 2, 3, 4, 5)</p>

	<ul style="list-style-type: none"> ● Conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered. (5-PS1-4) ● Make observations and measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon. (5-PS1-3) ● Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered. (3-5-ETS1-3) <p>Using mathematics and computational thinking (Investigation 1, 3, 4)</p> <ul style="list-style-type: none"> ● <p>Constructing explanations (Investigation 2, 3, 4, 5)</p> <ul style="list-style-type: none"> ● Measure and graph quantities such as weight to address scientific and engineering questions and problems. (5-PS1-2) ● Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design problem. (3-5-ETS1-2)
<p>Disciplinary Core Ideas</p>	<p>PS1.A: Structure and properties of matter (Investigation 1, 2, 3, 4, 5)</p> <ul style="list-style-type: none"> ● Matter of any type can be subdivided into particles that are too small to see, but even then the matter still exists and can be detected by other means. A model showing that gases are made from matter particles that are too small to see and are moving freely around in space can explain many observations, including the inflation and shape of a balloon and the effects of air on larger particles or objects. (5-PS1-1) ● The amount (weight) of matter is conserved when it changes form, even in transitions in which it seems to vanish. (5-PS1-2) Measurements of a variety of properties can be used to identify materials. (Boundary: At this grade level, mass and weight are not distinguished, and no attempt is made to define the unseen particles or explain the atomic-scale mechanism of evaporation and condensation.) (5-PS1-3) <p>PS1.B: Chemical reactions (Investigation 5)</p> <ul style="list-style-type: none"> ● When two or more different substances are mixed, a new substance with different properties may be formed. (5-PS1-4) ● No matter what reaction or change in properties occurs, the total weight of the substances does not change. (Boundary: Mass and weight are not distinguished at this grade level.) (5-PS1-2) <p>ETS1.A: Defining and delimiting engineering problems (Investigation 1, 4)</p> <ul style="list-style-type: none"> ● Possible solutions to a problem are limited by available materials and resources (constraints). The success of a designed solution is determined by considering the desired features of a solution (criteria). Different proposals for solutions can be compared on the basis of how well each one meets the specified criteria for success or how well each takes the constraints into account. <p>ETS1.B: Developing possible solutions (Investigation 1, 4)</p> <ul style="list-style-type: none"> ● Research on a problem should be carried out before beginning to design a solution. Testing a solution involves investigating how well it performs under a range of likely conditions. (3-5-ETS1-2) ● At whatever stage, communicating with peers about proposed solutions is an important part of the design process, and shared ideas can lead to improved designs. (3-5-ETS1-2) ● Tests are often designed to identify failure points or difficulties, which suggest the

	<p>elements of the design that need to be improved. (3-5-ETS1-3)</p> <p>ETS1.C: Optimizing the design solution (Investigation 1)</p> <ul style="list-style-type: none"> • Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints.
Cross Cutting Concepts	<p>Cause and effect (Investigation 1, 2, 3, 4, 5)</p> <ul style="list-style-type: none"> • Cause and effect relationships are routinely identified, tested, and used to explain change. (5-PS1-4) <p>Scale, proportion, and quantity (Investigation 1, 3, 4, 5)</p> <ul style="list-style-type: none"> • Natural objects exist from the very small to the immensely large. (5-PS1-1) • Standard units are used to measure and describe physical quantities such as weight, time, temperature, and volume. (5-PS1- 2),(5-PS1-3)
Required Investigations	<p>Investigation 1 - Separating Mixtures (approx. 10 days)</p> <p>Investigation 2 - Developing Models (approx. 10 days)</p> <p>Investigation 3 - Concentration (approx. 10 days)</p> <p>Investigation 4 - Reaching Saturation (approx. 12 days)</p> <p>Investigation 5 - Fizz Quiz (approx. 8 days)</p>
Required Summative Assessment(s)	<p>Science and Engineering Practices</p> <ul style="list-style-type: none"> • Performance Assessment- Investigation 1: part 3 • Performance Assessment- Investigation 2: part 2 • Performance Assessment- Investigation 3: part 3 • Performance Assessment- Investigation 4: part 3 <p>Performance Expectations (conceptual understanding)</p> <ul style="list-style-type: none"> • Investigation 1 I-Check • Investigation 2 I-Check • Investigation 3 I-Check • Investigation 4 I-Check • Posttest (After Part 3 in Investigation 5)

Unit Title: Living Systems

Quarter 2/3

Approximate Teaching Dates	Nov. 13 - Feb. 16 (approx. 50 days)
Domain(s)	Life Science (LS), Physical Science (PS), Earth and Space Science (ESS)
Performance Expectations	<p>4-LS1-2 (Investigation 4) Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways. [Clarification Statement: Emphasis is on systems of information transfer.] [Assessment Boundary: Assessment does not include the mechanisms by which the brain stores and recalls information or the mechanisms of how sensory receptors function.]</p> <p>5-PS3-1 (Investigation 1, 2, 3, 4) Use models to describe that energy in animals' food (used for body repair, growth, motion, and to maintain body warmth) was once energy from the sun. [Clarification Statement: Examples of models could include diagrams, and flow charts.]</p> <p>5-LS1-1 (Investigation 2, 3) Support an argument that plants get the materials they need for growth chiefly from air and water. [Clarification Statement: Emphasis is on the idea that plant matter comes mostly from air and water, not from the soil.]</p> <p>5-LS2-1 (Investigation 1, 2, 3, 4) Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment. [Clarification Statement: Emphasis is on the idea that matter that is not food (air, water, decomposed materials in soil) is changed by plants into matter that is food. Examples of systems could include organisms, ecosystems, and the Earth.] [Assessment Boundary: Assessment does not include molecular explanations.]</p> <p>5-ESS2-1 (Investigation 1, 4) Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact. [Clarification Statement: Examples could include the influence of the ocean on ecosystems, landform shape, and climate; the influence of the atmosphere on landforms and ecosystems through weather and climate; and the influence of mountain ranges on winds and clouds in the atmosphere. The geosphere, hydrosphere, atmosphere, and biosphere are each a system.] [Assessment Boundary: Assessment is limited to the interactions of two systems at a time.]</p> <p>5-ESS3-1 (Investigation 4) Obtain and combine information about ways individual communities use science ideas to protect the Earth's resources and environment.</p>
Science and Engineering Practices	<p>Developing and using models (Investigation 1, 2, 3)</p> <ul style="list-style-type: none"> ● Use models to describe phenomena. (5-PS3-1) ● Develop a model to describe phenomena. (5-LS2-1) ● Develop a model using an example to describe a scientific principle. (5-ESS2-1) <p>Engaging in argument from evidence (Investigation 2)</p> <ul style="list-style-type: none"> ● Support an argument with evidence, data, or a model. (5-LS1-1) <p>Obtaining, evaluating, and communicating information (Investigation 4)</p> <ul style="list-style-type: none"> ● Obtain and combine information from books and/or other reliable media to explain phenomena or solutions to a design problem. (5-ESS3-1)

<p>Disciplinary Core Ideas</p>	<p>PS3.D: Energy in chemical processes and everyday life (Investigation 1, 2, 3, 4)</p> <ul style="list-style-type: none"> The energy released [from] food was once energy from the sun that was captured by plants in the chemical process that forms plant matter (from air and water) <p>LS1.C: Organization for matter and energy flow in organisms (Investigation 1, 2, 3, 4)</p> <ul style="list-style-type: none"> Food provides animals with the materials they need for body repair and growth and the energy they need to maintain body warmth and for motion. Plants acquire their material for growth chiefly from air and water. <p>LS1.D: Information processing (Investigation 4)</p> <ul style="list-style-type: none"> Different sense receptors are specialized for particular kinds of information, which may be then processed by the animal’s brain. Animals are able to use their perceptions and memories to guide their actions. <p>LS2.A: Interdependent relationships in ecosystems (Investigation 1, 2)</p> <ul style="list-style-type: none"> The food of almost any kind of animal can be traced back to plants. Organisms are related in food webs in which some animals eat plants for food and other animals eat the animals that eat plants. Some organisms, such as fungi and bacteria, break down dead organisms (both plants or plants parts and animals) and therefore operate as “decomposers.” Decomposition eventually restores (recycles) some materials back to the soil. Organisms can survive only in environments in which their particular needs are met. A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life. Newly introduced species can damage the balance of an ecosystem. <p>LS2.B: Cycles of matter and energy transfer in ecosystems (Investigation 1, 2, 3, 4)</p> <ul style="list-style-type: none"> Matter cycles between the air and soil and among plants, animals, and microbes as these organisms live and die. Organisms obtain gases, and water, from the environment, and release waste matter (gas, liquid, or solid) back into the environment <p>ESS2.A: Earth materials and systems (Investigation 1, 2, 4)</p> <ul style="list-style-type: none"> Earth’s major systems are the geosphere (solid and molten rock, soil, and sediments), the hydrosphere (water and ice), the atmosphere (air), and the biosphere (living things, including humans). These systems interact in multiple ways to affect Earth’s surface materials and processes. The ocean supports a variety of ecosystems and organisms, shapes landforms, and influences climate. Winds and clouds in the atmosphere interact with the landforms to determine patterns of weather. <p>ESS3.C: Human impacts on Earth systems (Investigation 4)</p> <ul style="list-style-type: none"> Human activities in agriculture, industry, and everyday life have had major effects on the land, vegetation, streams, ocean, air, and even outer space. But individuals and communities are doing things to help protect Earth’s resources and environments.
<p>Cross Cutting Concepts</p>	<p>Systems and system models (Investigation 1, 2, 3, 4)</p> <ul style="list-style-type: none"> A system can be described in terms of its components and their interactions. <p>Energy and matter (Investigation 1, 2, 3, 4)</p> <ul style="list-style-type: none"> Matter is transported into, out of, and within systems. (5-LS1-1) Energy can be transferred in various ways and between objects. (5-PS3-1)
<p>Required Investigations</p>	<p>Investigation 1 - Systems (approx. 11 days) Investigation 2 - Nutrient Systems (approx. 14 days) Investigation 3 - Transport Systems (approx. 13 days) Investigation 4 - Sensory Systems (approx. 9 days)</p>

Required Summative Assessment(s)	Science and Engineering Practices <ul style="list-style-type: none"> ● Performance Assessment- Investigation 1: part 4 ● Performance Assessment- Investigation 3: part 3 Performance Expectations (conceptual understanding) <ul style="list-style-type: none"> ● Investigation 1 I-Check ● Investigation 2 I-Check ● Investigation 3 I-Check ● Posttest (After Part 4 in Investigation 4)
---	--

Unit Title: Earth and Sun Quarter 3/4	
Approximate Teaching Dates	Feb. 20 - May 25 (approx. 55 days)
Domain(s)	Physical Science (PS), Earth and Space Science (ESS), Engineering, Technology, and Applications of Science (ETS)
Performance Expectations	<p>5-PS1-1 (Investigation 3) Develop a model to describe that matter is made of particles too small to be seen. [Clarification Statement: Examples of evidence supporting a model could include adding air to expand a basketball, compressing air in a syringe, dissolving sugar in water, and evaporating salt water.] [Assessment Boundary: Assessment does not include the atomic-scale mechanism of evaporation and condensation or defining the unseen particles.]</p> <p>5-PS2-1 (Investigation 2) Support an argument that the gravitational force exerted by Earth on objects is directed down. [Clarification Statement: "Down" is a local description of the direction that points toward the center of the spherical Earth.] [Assessment Boundary: Assessment does not include mathematical representation of gravitational force.]</p> <p>5-ESS1-1 (Investigation 2) Support an argument that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from the Earth. [Assessment Boundary: Assessment is limited to relative distances, not sizes, of stars. Assessment does not include other factors that affect apparent brightness (such as stellar masses, age, stage).]</p> <p>5-ESS1-2 (Investigation 1, 2) Represent data in graphical displays to reveal patterns of daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky. [Clarification Statement: Examples of patterns could include the position and motion of Earth with respect to the sun and selected stars that are visible only in particular months.] [Assessment Boundary: Assessment does not include causes of seasons.]</p> <p>5-ESS2-1 (Investigation 3, 4, 5) Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact. [Clarification Statement: Examples could include the influence of the ocean on ecosystems, landform shape, and climate; the influence of the atmosphere on landforms and ecosystems through weather and climate;</p>

	<p>and the influence of mountain ranges on winds and clouds in the atmosphere. The geosphere, hydrosphere, atmosphere, and biosphere are each a system.] <i>[Assessment Boundary: Assessment is limited to the interactions of two systems at a time.]</i></p> <p>5-ESS2-2 (Investigation 3, 5) Describe and graph the amounts of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth. <i>[Assessment Boundary: Assessment is limited to oceans, lakes, rivers, glaciers, ground water, and polar ice caps, and does not include the atmosphere.]</i></p> <p>5-ESS3-1 (Investigation 5) Obtain and combine information about ways individual communities use science ideas to protect the Earth’s resources and environment.</p> <p>3-5-ETS1-2 (Investigation 4) Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.</p> <p>3-5-ETS1-3 (Investigation 4) Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.</p>
<p>Science and Engineering Practices</p>	<ul style="list-style-type: none"> ● Developing and Using Models (Investigation 1, 2, 3, 4, 5) ● Planning and Carrying Out Investigations (Investigation 1, 2, 3, 4, 5) ● Analyzing and Interpreting Data (Investigation 1, 2, 3, 4, 5) ● Using Mathematics and Computational Thinking (Investigation 1, 2, 3, 4, 5) ● Constructing Explanations and Designing Solutions (Investigation 1, 2, 3, 4, 5) ● Engaging in Argument from Evidence (Investigation 2, 4, 5) ● Obtaining, Evaluating, and Communicating Information (Investigation 1, 2, 3, 4, 5)
<p>Disciplinary Core Ideas</p>	<p>PS1.A: Structure and Properties of Matter (Investigation 3, 4, 5)</p> <ul style="list-style-type: none"> ● Matter of any type can be subdivided into particles that are too small to see, but even then the matter still exists and can be detected by other means. A model showing that gases are made from matter particles that are too small to see and are moving freely around in space can explain many observations, including the inflation and shape of a balloon and the effects of air on larger particles or objects. (5-PS1-1) <p>PS2.B: Types of Interactions (Investigation 2)</p> <ul style="list-style-type: none"> ● The gravitational force of Earth acting on an object near Earth’s surface pulls that object toward the planet’s center. (5- PS2-1) <p>ESS1.A: The Universe and its Stars (Investigation 1, 2)</p> <ul style="list-style-type: none"> ● The sun is a star that appears larger and brighter than other stars because it is closer. Stars range greatly in their distance from Earth. (5-ESS1-1) <p>ESS1.B: Earth and the Solar System (Investigation 1, 2)</p> <ul style="list-style-type: none"> ● The orbits of Earth around the sun and of the moon around Earth, together with the rotation of Earth about an axis between its North and South poles, cause observable patterns. These include day and night; daily changes in the length and direction of shadows; and different positions of the sun, moon, and stars at different times of the day, month, and year. (5-ESS1-2) <p>ESS2.A: Earth Materials and Systems (Investigation 3, 4, 5)</p> <ul style="list-style-type: none"> ● Earth’s major systems are the geosphere (solid and molten rock, soil, and sediments), the hydrosphere (water and ice), the atmosphere (air), and the biosphere (living things, including humans). These systems interact in multiple ways

	<p>to affect Earth’s surface materials and processes. The ocean supports a variety of ecosystems and organisms, shapes landforms, and influences climate. Winds and clouds in the atmosphere interact with the landforms to determine patterns of weather. (5-ESS2-1)</p> <p>ESS2.C: The Roles of Water in Earth’s Surface Processes (Investigation 3, 5)</p> <ul style="list-style-type: none"> Nearly all of Earth’s available water is in the ocean. Most fresh water is in glaciers or underground; only a tiny fraction is in streams, lakes, wetlands, and the atmosphere. (5-ESS2-2) <p>ESS3.C: Human Impacts on Earth Systems (Investigation 4, 5)</p> <ul style="list-style-type: none"> Human activities in agriculture, industry, and everyday life have had major effects on the land, vegetation, streams, ocean, air, and even outer space. But individuals and communities are doing things to help protect Earth’s resources and environments. (5-ESS3-1) <p>ETS1.B: Developing Possible Solutions (Investigation 4)</p> <ul style="list-style-type: none"> Research on a problem should be carried out before beginning to design a solution. Testing a solution involves investigating how well it performs under a range of likely conditions. (3-5-ETS1-2) At whatever stage, communicating with peers about proposed solutions is an important part of the design process, and shared ideas can lead to improved designs. (3-5-ETS1-2) Tests are often designed to identify failure points or difficulties, which suggest the elements of the design that need to be improved. (3-5-ETS1-3) <p>ETS1.C: Optimizing the Design Solution (Investigation 4)</p> <ul style="list-style-type: none"> Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints. (3-5-ETS1-3)
<p>Cross Cutting Concepts</p>	<p>Patterns (Investigation 1, 2, 4)</p> <ul style="list-style-type: none"> Similarities and differences in patterns can be used to sort, classify, communicate and analyze simple rates of change for natural phenomena. (5-ESS1-2) <p>Cause and Effect (Investigation 1, 2, 3, 4, 5)</p> <ul style="list-style-type: none"> Cause and effect relationships are routinely identified and used to explain change.
